

## **Urban Population Health Toolkit**

### **Urban Population Health Toolkit: Coming Soon**

In light of the COVID-19 pandemic, the world continues to grapple with the growing tide of cardiovascular diseases – and cities play an ever more essential role in determining the health outcomes of populations.

The Novartis Foundation and its partners pioneered a new strategy for addressing cardiovascular disease in low-income urban settings. The new strategy consists of six pillars, summarized as **CARDIO** – shorthand for quality of Care, Access, Policy Reform, Digital technology, Intersectoral collaboration, and Ownership.

The **CARDIO** approach will be presented in the Urban Population Health Toolkit in early 2021. The toolkit will provide policy makers and global health actors with insights, best practices, evidence-based strategies, and resources to improve hypertension detection, treatment and control.
